

2nd Law of Thermodynamics!

'Every system left to it's own devices always tends to move from order to *disorder*.'

This is one reason why God said that it's not good that man should be alone....[see Genesis 2:18]

The following illustrates this principal fairly accurately...

(but if you ask the guys under my roof,
"What's wrong with this picture?"
they just aren't going to understand!
... and neither will the cat in the photos...)

And so the saga of the 2nd Law of Thermal Dynamics continues on.....

and on.....

and on.....

It's the bachelor pad happening!

order
order

When a system moves from

to **disorder**,

energy is lost.

Why?

Because it's going to take all kinds of

energy

to put it back in order!!

That makes sense, doesn't it?
